

EduMind AI Executable Files

Date September 2026
Team ID xxxxxx
Project Name EduMind AI - Smart AI-Powered Learning Assistant
Maximum Marks 3 Marks

Step 1: Executable Project Contents

The following items represent the executable/application-related project contents prepared for running and demonstrating the EduMind AI solution.

S.No	Project Item	Type	Purpose / Usage
1	main.py	Python file	Starts the FastAPI application and exposes the web/API routes.
2	gemini_client.py	Python file	Creates the Gemini client and sends prompts to the AI service.
3	qna.py	Python module	Handles question-answering requests.
4	explanation_module.py	Python module	Generates beginner-friendly explanations.
5	quiz_module.py	Python module	Generates topic-based quizzes.
6	notes_module.py	Python module	Generates structured study notes.
7	summary_module.py	Python module	Generates concise summaries.
8	learning_path.py	Python module	Generates topic and level-based learning paths.
9	templates/index.html	HTML file	Provides the main EduMind AI user interface.
10	static/	Folder	Contains static web assets used by the interface.
11	requirements.txt	Text file	Lists the Python dependencies required by the project.
12	.env	Environment file	Stores the Gemini API credential locally; not for public sharing.

Step 2: Run the Project

Open the project folder in Visual Studio Code, install the dependencies, keep the Gemini API credential in the local .env file, and start the application using Uvicorn. The local application is then opened in a web browser using the configured localhost address.

Step 3: Security Note

The API key is a private credential. It must not be included in screenshots, public documentation, source repositories or demonstration materials.
