

Proposed EduMind AI Solution

Date September 2026
Team ID xxxxxx
Project Name EduMind AI - Smart AI-Powered Learning Assistant
Maximum Marks 3 Marks

Step 1: Proposed Solution

EduMind AI is a web-based educational assistant that uses Generative AI to provide learning support through a single, simple interface.

Step 2: Main Functional Areas

Module	Description	Primary User Benefit
Question Answering	Answers questions across programming, mathematics, science, technology and general learning.	Quick access to relevant explanations.
Concept Explanation	Explains a topic using simple language and examples.	Improved understanding of difficult concepts.
Quiz Generation	Creates topic-based practice questions.	Self-assessment and revision.
Study Notes	Produces structured notes with key points and examples.	Faster revision.
Summarization	Condenses long learning content into shorter summaries.	Saves study time.
Learning Path	Suggests a topic sequence based on topic and learner level.	Structured learning direction.

Step 3: User Interaction

The learner enters a request in the web interface. The backend routes the request to the selected learning module, creates an appropriate prompt, calls the Gemini AI service, and returns the generated response to the learner.
