

EduMind AI Data Flow

Date September 2026
Team ID xxxxxx
Project Name EduMind AI - Smart AI-Powered Learning Assistant
Maximum Marks 3 Marks

Step 1: Data Flow Overview

The application follows a simple request-response flow between the learner, frontend, backend and Gemini AI service.

Step	Component	Data / Action
1	Student / User	Enters a question, topic or learning request.
2	EduMind AI Frontend	Sends the request to the selected feature.
3	FastAPI Backend	Receives and routes the request to the appropriate module.
4	Feature Module	Builds an AI prompt for Q&A;, explanation, quiz, notes, summary or learning path.
5	Gemini API	Processes the prompt and generates an AI response.
6	Backend Response	Receives the generated content and returns it to the frontend.
7	Student / User	Views the final response and continues learning.

Step 2: Simplified Flow

User -> Frontend -> FastAPI Backend -> Feature Module -> Gemini API -> Backend Response -> User
