

Define Problem Statements

Date September 2026
Team ID xxxxxx
Project Name EduMind AI - Smart AI-Powered Learning Assistant
Maximum Marks 3 Marks

Step 1: Identify the Core Problem

Students often use separate tools for question answering, concept explanation, quiz practice, note creation, summarization and learning guidance. This fragmented workflow can make learning less organized and increase the time needed to find and prepare study material.

Step 2: Problem Statements

S.No	Problem Statement	User Impact	Priority
1	Students need one place to ask questions on multiple learning topics.	More time spent switching between tools.	High
2	Difficult concepts are not always explained in a beginner-friendly way.	Students may struggle to understand core ideas.	High
3	Students need quick practice material such as quizzes and revision notes.	Practice and revision may be inconsistent.	High
4	Students may not know what to learn next or how to structure a topic.	Learning can become unstructured.	Medium

Step 3: Final Problem Statement

How might we provide students with a single AI-powered learning assistant that can answer questions, explain concepts, generate quizzes and study notes, summarize content, and recommend a structured learning path in a simple interface?
